PROFILE

Software engineering student at Babcock University working across web applications, desktop experiments, and 3D animation. I learn by building useful tools and visual studies, from university timetables and document workflows to NFC interactions. I publish my work under the name MarkOS.

SELECTED PROJECTS

Upright / Live web project

Created a browser-based document compiler that brings Word documents, PDFs, spreadsheets, presentations, and images into a unified document, with preview and download controls.

Time Tableau / Live beta

Developed a university timetable project and shaped it into a student-facing experience after sharing previews with classmates. The current beta presents class schedules, a calendar, and next-class information.

NFC Bridge / Prototype

Exploring a phone-to-desktop bridge over USB, with the goal of mapping scanned NFC tags to configurable computer actions such as opening apps or starting a timer.

SenseAid / University prototype · Lead developer

Led development in a six-person team on an accessible education prototype. Built site-based tools and resources using HTML, TypeScript, Node.js, and Firebase.

Three cars. One frame. / 3D and motion study

Created a Blender racing scene exploring composition, lighting, camera movement, and animation. Presented the rendered film, a viewport breakdown, and an interactive 3D view in the MarkOS portfolio.

SKILLS & TOOLS

Languages: JavaScript, TypeScript, Python, C, C++, C#, HTML, CSS

Web: React, Vite, Next.js, Node.js, Supabase, Firebase

Creative & workflow: Blender, After Effects, video editing, Unity, Git

EDUCATION & PARTICIPATION

BSc Software Engineering · Babcock University

Current undergraduate student. Participant, Babcock University Innovation Challenge 2024.
